Ivor E. Sies
Improvement Supervisor

COMPLETION REPORT
DEVELOPMENT PROJECT

State of Idaho

Project No. F 46-D-1

Title Fish Barrier Dam - Pettit Lake

Pettit Lake is located approximately 21 miles above Stanley, Idaho. Having a surface area of 395 acres, maximum depth of 85 feet and containing some 33,000 acres feet of water this lake was treated in September, 1960, with toxaphene to eradicate all fish life.

While this water was yet toxic, the fish and game department construction crew built a four foot high, 51 foot wide concrete fish barrier dam in accordance with the approved plans and specifications.

Work was completed on October 13, 1961, at a total cost of \$7,552.31.

This lake will be restocked by the Idaho Department of Fish and Game with game fish species including Rainbow and Kokanee.
